

UP! Insight

Remote transparency to faster action

Digital
empowerment

UP! Insight is a cloud-based monitoring solution that delivers real-time diagnostics and analytics for your compressor systems. With instant incident alarms, action recommendations and expert-driven data reviews, it empowers faster issue resolution, smarter maintenance strategies and fleet-wide optimization — without the need for additional hardware.

Key features

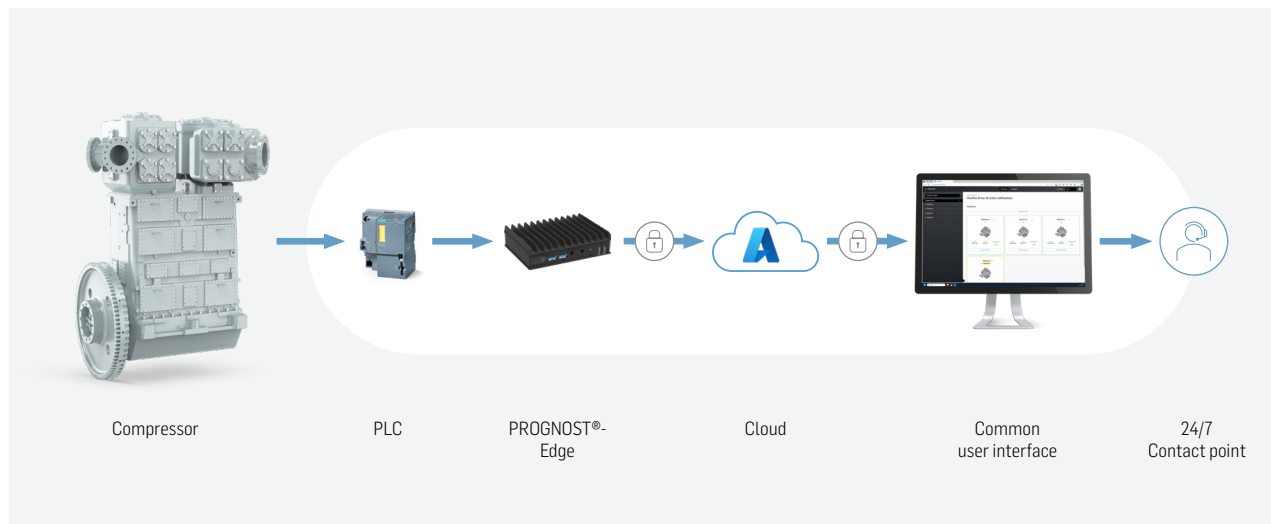

- **Real-time data access:** Access operational PLC data anytime, anywhere
- **Operational statistics dashboard:** View the most relevant KPIs identifying compressor inefficiencies
- **Instant action recommendations:** Individual troubleshooting guidance
- **Data assessments:** Regular data reviews as part of our service agreements

Benefits

- **Minimize downtime:** Quickly restore compressor operations with fast, expert-led troubleshooting using real-time insights
- **Accelerate problem resolution:** Identify and resolve issues faster based on data-driven decisions and our expert support
- **Reduce operating costs:** Lower maintenance expenses through improved fleet visibility and faster support response
- **Gain remote transparency:** Monitor and compare compressor performance across your entire fleet

UP! Insight — A data-driven approach to compressor efficiency and uptime

"UP! Insight has significantly enhanced our operations by delivering real-time transparency into the performance of our hydrogen compressors. The system empowers faster, data-driven decision making and reduces unplanned downtime through automated service recommendations. What we value most is the strengthened collaboration with Burckhardt Compression — seamless data exchange and 24/7 remote support ensure that any issues or inquiries are resolved promptly. This closer partnership has been truly appreciated and has transformed the way we manage and maintain our hydrogen production facility."

Marcel Bader

Hydrogen Project Manager, SAK St. Gallisch-Appenzellische Kraftwerke AG
