Burckhardt Compression wins first order with a new line of cost-optimized compressors

Burckhardt Compression is introducing a capex-optimized line of compressor systems that meets the API Standard 618. Its modular compressor design takes advantage of global processes and cost-efficient engineering and supply chain. Hyundai Engineering Company has ordered the first compressors from this new product line for a petrochemical plant in Poland, where they will be used for propane dehydrogenation in the production of propylene.

Burckhardt Compression registers their first commercial success with a new capex-optimized line of compressors compliant with API Standard 618 launched a few months ago. "Burckhardt Compression has leveraged its global setup with locations around the world to offer this new, capex-optimized line of compressors. It allows us to target and win over new groups of customers for our products," says Marcel Pawlicek, CEO of Burckhardt Compression.

First order received

The first two compressors from this new product line will be used for propane dehydrogenation in the production of propylene at a plant in Poland. The two compressors will be driven by 5 MW electric motors.

About Burckhardt Compression

Burckhardt Compression is the worldwide market leader for reciprocating compressor systems and the only manufacturer and service provider that covers a full range of reciprocating compressor technologies and services. Its customized compressor systems are used in the upstream oil & gas, gas transport and storage, refinery, chemical, petrochemical and industrial gas sectors. Cutting-edge compressor technology, a vast portfolio of components and full services capability make Burckhardt Compression an ideal partner for customers around the world who want highly reliable, custom-tailored solutions for their reciprocating compressor systems. Since 1844 its skilled workforce has crafted superior solutions and set the benchmark in the gas compression industry.
